Ali Abharya

Senior Python Backend Engineer

Practical Backend Engineer with 5+ years of experience in building and modernizing Python-based systems using Django and FastAPI. Specialized in API design (REST, GraphQL, gRPC), performance optimization and unit testing. As an open source contributor, actively maintaining two django packages named django-persian-pdf and django-cache-pydantic.

WORK EXPERIENCE

Backend Engineer
Rayan Bourse

2023 - 2025

- Designed and maintained multiple internal Python packages (CLI tools, validation libraries, object storage utilities, and third-party APIs), improving developer productivity across the team.
- Led code quality initiative by introducing code review template, Ruff linting rules, pre-commit hooks and SonarQube reports, resulting in more consistent and maintainable codebases. Additionally built an internal "Software Architecture" AI agent using LangChain and Streamlit to support architectural decision-making and standardize design discussions across the team.
- Refactored and optimized legacy systems by identifying performance issues via Sentry, resolving N+1 queries, improving indexing, and introducing caching strategies.
- Re-architected multiple legacy products using Django, introducing new features: 1) Event-driven notification service using SSE, 2) Abstract workflow engine using state-machine pattern, 3) Seamless user interaction using htmx, 4) SSO-based authentication and authorization, 5) Dynamic role-based report generation using GraphQL.

Backend Engineer
Asmari Insurance

2022 - 2023

- Implemented a real-time notification system using Django Channels and DRF, enabling admin users to send live and scheduled notifications via WebSocket and Celery tasks.
- Refactored the authorization system by introducing an abstract permission layer using the Strategy pattern, significantly reducing code duplication and streamlining future extensions.
- Unified multiple external SOAP and REST API services by applying the Command pattern, improving maintainability.
- Split a monolithic, template-based financial reporting system into separate backend (DRF) and frontend (Vue) services.

Fullstack Engineer
Ofogh Fannavar Noura

2020 - 2021

- Developed a data analysis dashboard using Django REST Framework, psycopg2, pandas, Vue 3, Vutify and APEX chart similar to Power BI dashboard including functionalities such as cross-filter and drill through. Effectively allowing business domain experts to be able to extract financial insights by interacting with dynamic charts.

TECHNOLOGY STACK

Python | Django | Fast API | Pydantic | Celery | Pytest | SQL Alchemy | Django REST Framework | Django-Channels | GraphQL | LangChain | Streamlit | Docker | Github Actions | Jenkins | nginx | SQL | PostgreSQL | Oracle | Redis | Git | pre-commit | Javascript | Vue 3 | htmx | LaTeX | Ubuntu

OPEN SOURCE PROJECTS

- Django Persian PDF
- Django Cache Pydantic
- Twitter Fast API
- Twitch Polling Gateway
- Spotify Gin API
- Oracle Postgres Migration CLI
- Twitch Chat Moderation Bot

ACADEMIC PUBLICATION

JDL Fusion Model for ECG Arrhythmia Detection, A Statistical Classifier (12/2012)

INTERNATIONAL JOURNAL OF SIGNAL PROCESSING, IMAGE PROCESSING AND PATTERN RECOGNITION
